

## **SAQ1**

Use the Statistics Attitude Questionnaire (SAQ) and data to carry out appropriate EFA data analyses to explore the dispositions measured, gathered data, results, and findings leading to a determination if there are measured latent traits. Make no assumptions that the original instructors who captured these data knew what they were doing. Detail and discuss your rationale, methods, choices, procedures, and processes. Explain and interpret your findings and conclusions. Present your analysis and results along with your findings, decisions, discussion, interpretations, and conclusions. You are permitted and encouraged to work as a team with one other current 905 classmate. You may work alone if you wish. Reach out to other classmates and make your decision. Work is to be done alone or within your team exclusively... You/your team is to work alone! Questions that may arise are to be communicated to Dr. Poggio. Your completed HW#2 assignment is to be sent electronically as email attachments (MS Office documents, please) to Dr. Poggio by Wednesday, April 24, not later than 4:30 PM.

### **SAQ questions were answered and coded using the following response scale:**

- 1 = Strongly Agree
- 2 = Agree
- 3 = Neither
- 4 = Disagree
- 5 = Strongly Disagree
- Blank = No Response/Omitted
